

PRIYANSH GUPTA

Software Developer

+919319614027 • guptapriyansh1555@gmail.com • <https://www.linkedin.com/in/guptapriyansh098> • Noida, India

Summary

Software Engineer with 3+ years of experience in backend development, system optimization, and automation. Skilled in **.NET Core**, **ASP.NET MVC**, **C#**, **SQL Server**, and **AWS**. Expertise in **RESTful APIs**, **SOAP services**, and deploying **microservices** on scalable cloud platforms. Proficient in **Entity Framework**, **Docker**, and **DevOps** tools. Focused on optimizing performance, reducing latency, and automating workflows in **Agile** teams.

Education

Lovely Professional University

Phagwara, India

Bachelors of Technology (Computer Science and Engineering)

06/2019 - 06/2023

Technical Skills

Development & Programming:

C# • ASP.NET Core • ASP.NET MVC • .NET Framework • JavaScript • jQuery • AJAX • HTML • CSS • SQL • MySQL • MongoDB • AWS DynamoDB • Snowflake • React.js

Tools & Technologies:

Postman • Power BI • SSRS • Entity Framework • RabbitMQ • gRPC • Solr • Google Tag Manager • AWS SES/SNS • Docker • Podman • IIS • GitHub • Microsoft SSMS

Methodologies & Soft Skills:

Microservices • REST APIs • ETL • Task vs Thread • Logging & Monitoring • DSA • Strategic Thinking • Problem Solving • Team Collaboration • Communication

Experience

Indus Valley Partners

Noida, India

Software Engineer

10/2024 - Present

- Contributed to two enterprise products – EDM and Polaris, focusing on data automation, reporting, and system optimization.
- Created reports for fragmentation analysis and query performance. Optimized large-scale SQL queries through indexing, data compression, and algorithmic tuning.
- Built containerized microservices using Docker, Kubernetes, and Podman to enhance scalability and deployment efficiency.
- Integrated RabbitMQ, implemented gRPC services, and enabled parallel task execution by analyzing Task vs Thread performance.
- Automated deployments via IIS, developed file watcher and scheduler modules, and explored front-end reporting tools like React.js, Power BI, and SSRS for interactive dashboards.

Affixious Consulting Private Limited

Noida, India

Software Engineer

07/2022 - 10/2024

- Developed a dynamic flight pricing system and a real-time hotel pricing engine using .NET Core with SOAP and REST APIs.
- Built secure, scalable APIs for user authentication, supplier integration, and dynamic pricing logic.
- Designed and implemented Extranet, a hotel inventory management portal, using ASP.NET MVC and Entity Framework.
- Maintained and enhanced Legacy System, integrating payment gateways like NAPS and MasterCard, and improving tracking with Google Tag Manager (GTM).
- Led development of automation systems for currency synchronization, email alerts, encryption, and database updates using .NET console applications.

Projects

EDM – Enterprise Data Management System

Tech: .NET, SQL Server, MySQL, IIS, ETL, AWS, Automation

- Built data pipelines using a visual block-based architecture to automate enterprise-level data ingestion, transformation, and export.
- Designed sub-pipes and scheduled tasks to pull data from Excel, SQL tables, views, and stored procedures into various data targets.
- Developed and maintained reusable functional blocks and integrated custom business logic for clients such as **Morgan Stanley**, and **Mid-Ocean Partners**.
- Led daily monitoring of pipeline failures, log analysis, error handling, and versioned pipeline execution with rollback capabilities.

Polaris – Report Management Platform

Tech: SQL Server, SSRS, Power BI, ASP.NET

- Created and managed report-specific datasets and dictionaries to power visual reports for enterprise clients.
- Mapped data lineage and structured source-to-report metadata relationships to ensure accurate report rendering.
- Published and versioned client-specific reports, ensuring scalability and reusability of datasets across modules.
- Optimized report performance through custom query sets and dictionary design for dynamic business views.

Trip-In-Deal & Hotel-Core-API – Real-Time Flight & Hotel Pricing System

Tech: .NET Core, SQL Server, SOAP (WSDL), REST APIs, AWS, Google Tag Manager

- Designed and developed a dynamic pricing engine to calculate real-time flight fares based on customer type, demand, and route parameters.
- Integrated multiple flight suppliers using WSDL-based SOAP APIs and REST clients to fetch and normalize flight data.
- Created custom fare logic and fallback mechanisms to maintain system uptime during third-party outages.
- Developed backend services for real-time hotel rate fetching, supporting custom rules for city codes, geolocation, and cancellation policies.
- Implemented dynamic inventory and pricing systems with caching layers to minimize latency and built supplier integration with security layers and logging pipelines.

Extranet – Hotel Inventory Management System

Tech: ASP.NET MVC, EF, SQL Server, JavaScript

- Designed a full-fledged admin system for property owners to manage hotel details, amenities, photos, dynamic pricing, and blackout dates.
- Integrated multiple role access (admin, supplier, user) with secure authentication.
- Added bulk operations, image optimization, and rule-based cancellation policies.

Internal Automation & Optimization Projects

Tech: .NET, .NET Core, SQL Server, IIS, Windows Scheduler, AWS SES/SNS, Solr, Console Apps

- Developed fragmentation analysis reports and performance dashboards for monitoring table/index health.
- Refactored slow-performing queries by applying indexing strategies and analyzing execution plans to improve system responsiveness.
- Automated nightly DB maintenance jobs for cleanup, stale data removal, and query usage tracking via IIS Scheduler.
- Built a currency rate sync engine to update real-time forex data into SQL and Solr, supporting time-sensitive downstream systems.
- Developed a custom email alerting system using SMTP and AWS SES with SNS-based delivery tracking.
- Implemented AES Encryption services to securely handle sensitive credentials, banking data, and card details.

Awards & Recognition

IVP Compliance Policy Competition

Won 1st position by securing top scores in all rounds of the internal quiz on company compliance policies.

Financial Hackathon 2025

Developed an AI-powered Second Brain app integrating OpenAI with Slack to centralize organizational knowledge efficiently.
